

An inventor's Vision for America

A book by Dr. Hengning Wu

Book description

America is at a critical junction. Either change or stagnate.

We have mounting government debt, rising income disparity, failing infrastructure, and a politically divided country. Around the world, globalization is in trouble. The crisis we are facing is unprecedented. We cannot find answers from history.

Dr. Hengning Wu is an inventor. This is an inventor's approach. This is a new approach, a system approach, and a nonpartisan approach.

Dr. Wu introduces autoway, a new transportation technology. Like railway, highway, and airplane in the past, autoway will be the decisive technology for prosperity in the 21st century.

He introduces a new concept of invention lab to develop fundamental technologies for job creation and investment opportunities.

He introduces a new concept of cell model for urban development, and describes how to build garden cities for today with urban trail, autoway, and road. No more traffic congestions and sprawls.

He introduces a new concept of interface in urban organization. Interface state will replace nation state and fundamentally solves the problem of world peace. He proposes a new constitution for the United States of America.

About the author

Dr. Hengning Wu has been an inventor focusing on fundamental ideas since 2000. Previously he has worked in industry and government labs in Denmark, the United States, and China for 17 years. He has a Ph.D. in materials science and engineering from Iowa State University.
